

Automated Data Preparation for Enterprises

Wealthport's artificial intelligence (AI)-driven software enables businesses to integrate new data 10x faster and reduce manual work in data preparation by 20x. Wealthport makes this possible by radically improving data quality and automating data cleaning, matching and categorisation of products or offerings.

Wealthport's Software as a Service (SaaS) features a user-friendly web interface designed for non-technical users. Unlike traditional rule-based ETL or scripting tools, Wealthport is a 'plug-and-play' system that continuously learns from business expert feedback and adapts to constantly changing data formats, structures, and nomenclatures.

Solution

- » Integrate and map data with different structures and formats into a single data schema (e.g. from legacy systems)
- » Clean, correct and normalise data attributes such as name, unit, supplier, dimensions, etc.
- » Categorise data and map categories from suppliers to internal categories or nomenclature
- » Create segments and correct miscategorisations
- » Identify configurable attributes and cluster offerings
- » Extract attributes from one field and reallocate values to the corresponding attribute column

Technical Features

- » Cloud-based Software-as-a-Service (SaaS)
- » Supported data formats: TXT, CSV, XLS, JSON and XML
- » Supported data sources: standard file systems, NoSQL, JDBC/ODBC, Hadoop and S3
- » Upload data via the Web application, RESTful API or ingest data directly from accessible storage
- » Upload limits: 5 GB via Web app and 5 TB through the API
- » Extremely scalable due to in-memory processing technology
- » OAuth2-based Identity Management Server with enterprise-grade authentication and authorisation features

Benefits

- » **Integrate new data 10x faster** by automating the schema mapping process
- » **Speed up time to market** by reducing time spent on preparing or updating data before publishing online or offline
- » **Scale up data management** by using AI technology to clean, integrate and categorise large data volumes faster and more accurately
- » **Reduce manual work by 20x** for sales and IT staff by automating routine data preparation activities

Pricing

Pricing is determined by the following factors to give you maximum flexibility and control over costs: **data volume**, **upload frequency**, **turnaround time**, **support response time** and **choice of processing location**.
